

NFWF

# Gulf Environmental Benefit Fund

### RECIPIENTS

The Nature Conservancy

### AWARD AMOUNT

\$1,777,500

### PARTNERS

Alabama Department of Conservation and Natural Resources

### LOCATION

Southwestern Mobile County, Alabama

### AWARD DATE

November 2015

### PROGRESS UPDATE

The project is progressing on schedule. A scope of work change is underway to include an additional acquisition. The appraisals were completed and negotiations are underway. (August 2016)

## ALABAMA

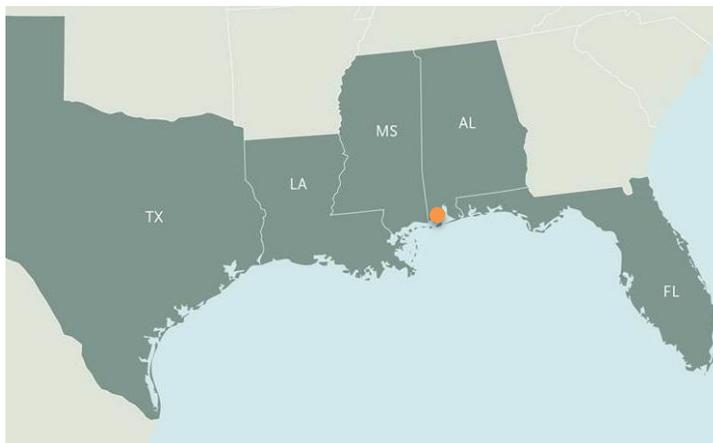

# Grand Bay Acquisition

This project will acquire three parcels consisting of 647 acres of priority coastal habitat in southwestern Mobile County. Grand Bay is one of the most pristine and diverse areas remaining on the Alabama Gulf coast and the parcels proposed for acquisition are critical inholdings linking existing protected and managed areas, providing a more holistic approach to long-term management and stewardship for the Grand Bay system. The broader Grand Bay complex includes a significant diversity of habitats including shell mounds, pine flatwood savannas, oak cheniers, coastal marshes, and salt pannes that feed into the vast seagrasses and oyster reefs which dominate the bay. In addition to the important finfish and shellfish habitat, several islands in and around Grand Bay support rookeries for populations of waterbirds, and the area is also heavily used by neotropical migrants.

The lands targeted in this proposal will be managed consistent with goals and objectives in place for existing adjacent protected and managed areas; including 6,500 acres in the state's Forever Wild Program in Grand Bay and Mississippi Sound. The acquisitions also complement the conservation benefits provided by the Grand Bay National Wildlife Refuge and overlapping Grand Bay National Estuarine Research Reserve, which protect nearly 18,400 acres of relatively undisturbed coastal wetlands and wildlife habitats to the west of the project area. The proposed acquisitions are critical inholdings in the Grand Bay complex and represent significant outstanding properties linking existing conservation lands across the broader Mississippi Sound landscape in the northern Gulf of Mexico. The project will restore the adjacent upland buffers through the control of invasive species, boundary posting and prescribed fire to enhance ecological function and resiliency.
